Body Mass Index Tracker

By Ekta Awasthi

MY Database APIs

API to fetch data from MongoDB-
`https://localhost:8080/https-web-service/v1/people-info`

API to insert, update, delete data in MongoDB-

`https://localhost:8080/https-web-service/v1/add-person`

`https://localhost:8080/https-web-service/v1/update-age`

`https://localhost:8080/https-web-service/v1/delete-person`

MY BMI Calculation APIs

API to connect with upstream API and give the BMI for a record-

```
https://localhost:8080/https-web-service/v1/fetch-api-data
```

API to interact with DB's data & BMI upstream API, calculate BMI for each record and store the records back to the database-

```
https://localhost:8080/https-web-service/v1/calculate-bmi
```

API to filter data from DB-

```
https://localhost:8080/https-web-service/v1/bmi-data/age-above-35
https://localhost:8080/https-web-service/v1/bmi-data/age-under-25
https://localhost:8080/https-web-service/v1/bmi-data/health-status/overweight
```

My React Application

Hello from BMI Calculator React App!

BMI Calculation for each record: [Check]
Health Record Under age 25: [Check]
Health Status Records other than 'Normal': [Check]

BMI Calculator

Age: [   ]
Weight (kg): [   ]
Height (cm): [   ]
[Calculate BMI]

Thank You
